

Can you help us to find out if COPD medicines can protect **your** **heart and lungs?**

Did you know that many people who have chronic obstructive pulmonary disease (COPD) also experience conditions that affect their heart as well as their lungs?

At AstraZeneca, we're studying how medications approved for treating COPD may improve both heart and lung health.

Would you like to help us?

We are looking for people between 40 and 80 years old with COPD who also have, or are at risk of heart problems and might be interested in joining a clinical trial.

To take the pre-screener and to find out further information, please visit the clinical trial website at **copdtrialandyou.com**

Scan to see if you can take part
